

CLAIMS

What is claimed is:

1. A method of managing a persistent federated folder within a federated content management system, comprising:
creating the persistent federated folder on a local datastore within the federated content management system;
mapping a plurality of entities to the persistent federated folder;
updating the persistent federated folder by modifying a members list, and
updating attributes of the persistent federated folder; and
deleting the persistent federated folder.
2. The method of claim 1, wherein modifying the members list comprises adding at least one new member.
3. The method of claim 1, wherein modifying the members list comprises removing at least one member.
4. The method of claim 1, further comprising selecting items in the plurality of entities as a result of a search.
5. The method of claim 1, further comprising a user selecting items in the plurality of entities.
6. The method of claim 1, further comprising an application selecting items in the plurality of entities.
7. The method of claim 4, further comprising saving a persistent identifier

reference in the persistent federated folder for each of the items in the entities selected as a result of the search.

8. The method of claim 5, further comprising saving a persistent identifier reference in the persistent federated folder for each of the items in the entities selected by the user.

9. The method of claim 6, further comprising saving a persistent identifier reference in the persistent federated folder for each of the items in the entities selected by the application.

10. The method of claim 1, wherein deleting the persistent federated folder does not delete items referenced in the persistent federated folder.

11. The method of claim 1, wherein the persistent federated folder contains at least one persistent federated folder.

12. The method of claim 1, wherein the persistent federated folder contains members from entities originating from heterogeneous datastores.

13. The method of claim 1, wherein the persistent federated folder contains members from an entity of the persistent federated folder.

14. The method in claim 1, wherein the persistent federated folder integrates seamlessly within the federated content management system allowing a federated query to operate transparently with respect to a client.

15. The method in claim 1, wherein the persistent federated folder system limits access rights of users according to users' general privileges.

16. The method in claim 1, further comprising providing administrative support for creating, mapping, and administering the persistent federated folder.

17. A computer program product having instruction codes for managing a persistent federated folder within a federated content management system, comprising:

a first set of instruction codes for creating the persistent federated folder on a local datastore within the federated content management system;

a second set of instruction codes for mapping a plurality of entities to the persistent federated folder;

a third set of instruction codes for updating the persistent federated folder by modifying a members list, and updating attributes of the persistent federated folder; and

a fourth set of instruction codes for deleting the persistent federated folder.

18. The computer program product of claim 17, wherein the third set of instruction codes modifies the members list by adding at least one new member.

19. The computer program product of claim 17, wherein the third set of instruction codes modifies the members list by removing at least one member.

20. The computer program product of claim 17, wherein the fourth set of instruction codes does not delete items referenced in the persistent federated folder.

21. The computer program product of claim 17, wherein the persistent federated folder contains members from entities originating from heterogeneous datastores.

22. The computer program product of claim 17, wherein the persistent federated folder contains members from an entity of the persistent federated folder.

23. The computer program product in claim 17, wherein the persistent federated folder system limits access rights of users according to users' general privileges.

24. A system for managing a persistent federated folder within a federated content management system, comprising:

- means for creating the persistent federated folder on a local datastore within the federated content management system;
- means for mapping a plurality of entities to the persistent federated folder;
- means for updating the persistent federated folder by modifying a members list, and updating attributes of the persistent federated folder; and
- means for deleting the persistent federated folder.

25. The system of claim 24, wherein the means for updating modifies the members list by adding at least one new member.

26. The system of claim 24, wherein the means for updating modifies the members list by removing at least one member.

27. The system of claim 24, wherein the means for deleting does not delete items referenced in the persistent federated folder.

28. The system of claim 24, wherein the persistent federated folder contains members from entities originating from heterogeneous datastores.

29. The system of claim 24, wherein the persistent federated folder contains members from an entity of the persistent federated folder.

30. The system in claim 24, wherein the persistent federated folder system limits access rights of users according to users' general privileges.
